Opis produktu

Spin Klin Fully Automatic Disc Filters

Spin Klin® Spine - the Core of the Spin Klin® Filter Systems
The Spin Klin spine holds the discs. It enables compression of the grooved discs which creates the filtration element during the filtration process.
See Disc Filtration Technology for more details.

Standard Features:

- Holds disc stack for micron-precise filtration of solids.
- Corrosion-resistant spine and housing.
- Innovative depth filter design captures and retains large amounts of solids - for longer filtration cycles.
- Short, efficient backwash process - saves water and

energy..

Easy and simple operation.

Long-term operation with little maintenance.

2" Spin Klin® Compact (stand alone)

Size:	2" inlet/ outlet manifold diameter
Capacity:	Small flow (8-20 m3/hr)
Operation:	Fully Automatic Disc Filtration

Standard Features:

Micron-precise filtration of solids.

Innovative filter design captures and stores large amounts of solids.

Long-term operation with little maintenance.

Easy and simple operation.

Special Features:

Automatic backwashing for self-cleaning.

The flushing cycle has a regulated volume, is short and environmentally friendly as it minimizes the use of flush water and automatically cleans the filter element. This saves labor and costs - minimum maintenance, and eliminates forever the need to replace filter media.

Compact design.
